ABOUT ME

Excited to say that, have practiced thousands of hours of coding and DSA with proficient knowledge in Java back-end development. A very enthusiastic and proactive person for learning new things, teamwork, managing time, building projects with teams, and good at contributing useful features to the projects as well.

PROJECTS

Tender Management System(Individual) GitHub Link

4 days project
This is a working project of managing tenders where the admin can release tenders and vendors can bid against every tender.

My Responsibilities:
- Creating different classes for respected tasks
- Creating respected data tables in database
- Creating a responsible connection between them

Tech Stacks:
- Java
- MySQL
- JDBC

YouTube clone (Individual) GitHub Link

3 days project
This is not exact clone of YouTube but some kind like that you can search and watch video here and also see trending short videos

My Responsibilities:
- Searching functionality
- Created buttons for sorting videos according to types
- showing trending videos on home page

Tech Stacks:
- JavaScript
- HTML & CSS
- API

Sugar Cosmetics Clone (Team project) GitHub Link

7 days Project
This is a clone of an existing E-commerce website where women buy their cosmetic products. We are 6 people in our group and everyone has contributed to it.

My Responsibilities:
- Filtering according to products type
- Sorting according to price
- Cart page UI and functionalities like adding, removing, and total price

Tech Stacks:
- JavaScript
- HTML & CSS
- JSON
